41, St. George's Court,

S. W. 7.

31st July, 1925.

The Governors,
Wandsworth Technical Institute.

Gentlemen,

During the academic year 1924-25, just ended, I medically examined 515 boys, of whom 49 were suffering from dental caries; and 14 from defects of vision (all errors of refraction easy of correction by spectacles). The percentage of cases of dental caries at the beginning of medical inspection was 42. It is now 9.

There were 135 boys below the average weight, and 219 above the average weight.

Problems of food, exercise, and hours of sleep, were discussed with the boys and with those parents who attended the inspections.

Many boys still go to bed too late.

The general health of the school appears to be good.

The hygenic conditions of the premises are satisfactory.

I am, Gentlemen,

Faithfully yours,

D. SOMMERVILLE.
